POPULATION ESTIMATES FOR NORTH CAROLINA MUNICIPALITIES AND COUNTIES

(July 1, 1983 Permanent Resident Population)

This report presents estimates of the July 1, 1983 permanent resident population of North Carolina, each of its 100 counties, and each of its 515 incorporated municipalities within boundaries as of July 1, 1983. For comparative purposes the April 1, 1980 and April 1, 1970 Census counts for each municipality within boundaries as of January 1 of each respective year are shown. This report also presents the population of all municipalities over 2,500 ranked by size.

The state and county population estimates presented here were prepared jointly by the United States Bureau of the Census and the North Carolina Office of State Budget and Management. The county estimates were prepared through the Federal-State Cooperative Program for Local Population Estimates. The methods used in generating the county estimates are discussed in detail in "Provisional Estimates of the Population of North Carolina Counties, July 1, 1983," State of North Carolina, Office of State Budget and Management, Research and Planning Services, August, 1984.

Municipal population estimates have been prepared by the Office of State Budget and Management to meet the needs of data users requiring estimates more current than the 1980 Census. Annual municipal estimates are prepared in two series: one for state and municipal planning purposes and a second for the distribution of State-shared revenues. The series presented in this publication is for planning purposes and estimates the population as of July 1, 1983 residing in municipal boundaries as of the same date.

Because of specific legislation, municipal estimates for revenue sharing purposes must reflect the population as of July 1, 1983 residing in municipal boundaries as of July 1, 1984. This latter series of estimates is regularly supplied to municipal and county governments and is available upon request.

The municipal population estimates were developed from federal census counts as reported in the 1980 Census of Population Vol. 1, Characteristics of the Population, Chapter A, Number of Inhabitants, PC80-1-A35, U.S. Department of Commerce, Bureau of the Census, including all known corrections to that report, and corresponding data from the 1970 Census of population. These federal statistics were then updated to July 1, 1983 by the North Carolina Office of State Budget and Management, Research and Planning Services, by the following procedure:

* Dr. Richard S. Kopec, Cartographer, Robin Butcher, Assistant, Department of Geography, University of North Carolina at Chapel Hill.

BASIC PROCEDURE

In preparing this year's municipal population estimates, several methods were used to independently estimate the non-group quarters population of each municipality and the county balance. For each method, for each municipality and county balance, a current estimate of the group quarters population is added to that estimate and the resulting estimate is independently controlled to the county estimate for 1983.

The municipal population estimate is based on an average of three or four methods, depending upon the availability of valid auto and truck registration data. Each method uses the non-group quarters population in computing the population base for 1980 (and 1970 if used). Where trends are used, they are then applied to the 1980 base population. Each of the three or four independently derived estimates are then averaged to produce the final estimate. If a city has had a special census since the federal census, that special census and the federal census are used to develop a growth rate which is weighted in with the growth rate derived assuming no special census, and the resulting rate is applied to the special census population at the special census date. To the 1983 estimate of the population living within 1980 census municipal boundaries is added the population in areas annexed from January 1, 1980 through July 1, 1983. The following is a brief description of the methods used:

METHOD I. CONSTANT PROPORTION

This method assumes that the non-group quarters population of a municipality grows at the same rate as the non-group quarters population of the county in which it is located. Each individual annexation from 1980 to 1983 is assumed to grow from its count date to July 1, 1983 at this same rate.

METHOD II. PARTITIONED CHANGE

This method assumes that areas more recently incorporated into the city limits of a municipality may grow at different rates from the core city which was in existence in 1970. The non-institutional population of a municipality is divided into three geographical areas: the 1970 core city (areas enclosed by the 1970 corporate limits), the suburbs (all areas annexed between 1970 and 1980), and individual areas annexed between January 1, 1980 and July 1, 1983. The 1980 population of the suburbs is estimated by growing each area annexed between 1970 and 1980, from its count date to 1980, at a rate determined by its density. From the 1980 suburban population, and the 1980 non-institutional population, the 1980 population of the core city is determined. The core city is assumed to grow from 1980 to 1983 at a rate which is a function of its 1970 to 1980 growth rate. The suburban area is grown from 1980 to 1983 at a rate which is a function of the growth rate of the core city, the growth rate of the county as a whole, the density of the suburban area, the density of the core city, and the density of the county as a whole. Each area annexed from 1980 to 1983 is grown from its count date to July 1, 1983 at a rate which is a function of the growth rate of the 1980 city (the core city plus the suburban area), the growth rate of the county as a whole, the density of the annexed area, the density of the 1980 city, and the density of the county as a whole.

METHOD III. VITAL RATES

This method uses either reported or estimated natural increase and an estimate of migration to estimate the change in the non-group quarters population of the municipality from 1980 to 1983. Natural increase data is available for all counties and for almost all larger (2,500 or greater population) municipalities. Natural increase for the non-urban (smaller municipalities plus unincorporated area) portion of each county is allocated to each of the smaller municipalities and the unincorporated area based on relative population. Migration for the estimate period is estimated using 1980 to 1982 migration rates derived from 1982 Federal Revenue Sharing data.

METHOD IV. AUTO AND TRUCK REGISTRATION

This method assumes that the growth of a municipality's share of the county population is proportional to the growth of its share of the automobiles and trucks registered in its county. Valid auto and truck registration data for most of the larger (more than 2,500 population) municipalities are available for December 31, 1981 and December 31, 1983. For other municipalities this method was not used.

Table 1 presents population estimates for North Carolina municipalities by county for July 1, 1983 in July 1, 1983 boundaries. Table 2 presents total populations for municipalities that are located in more than one county. Table 3 presents all North Carolina urban municipalities (i.e. those over 2,500) ranked by size for July 1, 1983. An index of municipalities giving their location by county appears for persons uncertain as to the location of certain cities.

DATA USER NOTES

Municipal estimates for each year during the 1980's have been generated independently of estimates for any previous year. This procedure allows flexibility for improvement of data sources and methods over the period of a decade. Trends in small area population do fluctuate from year to year and the user should be aware that the trend which is set for 1980-1983 may not be the same as the trend seen in previous or subsequent years. For this reason, any user studying the recent population trend for a particular municipality should compare only the most recent population estimate available with the 1980 and 1970 censuses as the best estimate of change.

¹ This municipality incorporated or reactivated between the 1970 and 1980 Censuses. The 1970 figure shown is a separation count derived by the Bureau of the Census shortly after incorporation and is therefore not published in 1970 Census Reports.

² This municipality is inactive but not officially disincorporated. Because of this status, the town was not reported separately by the Bureau of the Census for 1970 and/or 1980.

³ This municipality became a multi-county town through annexation since the 1970 Census.

⁴ This municipality incorporated since the 1980 Census. The figure shown for 1980 is a separation count derived after incorporation and is not published in 1980 Census reports.

⁵ The Village of Pinehurst incorporated in July 1980, and a 1970 Census separation count was calculated shortly thereafter. The figure shown for 1980 is also a separation count derived at a later time.

⁶ In 1970 the Town of Littleton consisted of a population of 433 in Halifax County and 470 in Warren County. In 1973 the General Assembly of North Carolina authorized a special election in order that the town's voters might decide in which of the two counties the town would be located. The result was a change in the county line so that Littleton is located totally in Halifax County. 1970 Census figures shown in this publication reflect these changes.

⁷ The towns of Gobbins Heights and Walkertown were incorporated in May and August of 1984 respectively. The 1983 estimates shown were derived without benefit of a 1980 separation count or a local census. A local census for each town will be completed before the 1984 estimates are computed.
